#### *Election/Restrictions*

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-22, drawn to a nucleic acid encoding a chimeric G protein with an amino acid sequence set forth in SEQ ID NO: 1, classified in class 536, subclass 23.5.
- II. Claims 1-22, drawn to a nucleic acid encoding a chimeric G protein with an amino acid sequence set forth in SEQ ID NO: 2, classified in class 536, subclass 23.5.
- III. Claims 1-22, drawn to a nucleic acid encoding a chimeric G protein with an amino acid sequence set forth in SEQ ID NO: 3, classified in class 536, subclass 23.5.
- IIII. Claims 1-22, drawn to a nucleic acid encoding a chimeric G protein with an amino acid sequence set forth in SEQ ID NO: 4, classified in class 536, subclass 23.5.

- V. Claims 1-22, drawn to a nucleic acid encoding a chimeric G protein with an amino acid sequence set forth in SEQ ID NO: 5, classified in class 536, subclass 23.5.
- VI. Claims 1-22, drawn to a nucleic acid encoding a chimeric G protein with an amino acid sequence set forth in SEQ ID NO: 41, classified in class 536, subclass 23.5.
- VII. Claim 77, drawn to a process for determining whether a chemical compound is a mammalian G protein-coupled receptor antagonist, classified in class 435, subclass 7.2.
- VIII. Claim 141, drawn to a process of screening clones for expression of a G-protein coupled receptor, classified in class 435, subclass 6.

The inventions are distinct, each from the other because of the following reasons:

Inventions I-VI are independent and distinct, each from the other, because they are products which possess characteristic differences in structure and function, and each has an independent utility, that is distinct for each invention which cannot be exchanged.

Inventions II and III are independent and distinct, each from the other, because the methods are practiced with materially different starting materials, have materially different process steps, and are for materially different purposes.

Inventions (I-VI) and III are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP

Art Unit: 1646

§ 806.05(h)). In the instant case the nucleic acid of invention I can be used for the production of protein.

Inventions (I-VI) and II are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions are not disclosed as capable of use together.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter and separate classification, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a petition under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
